1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Figure 1 of the instant application in view of Morgan or Ljungstrom.

Figure 1 of the instant application is considered by applicant to be prior art.

Figure 1 of the instant application discloses all of the claimed subject matter except for having six pair of curved actuating surfaces on the follower. Figure 1 of the instant application discloses six pair of flat actuating surfaces on the follower. Morgan (fig. 7, lines 20-35 of col. 3) or Ljungstrom (figs. 1-3, lines 1-20 of page 1) disclose recesses bound by curved actuating surfaces. It would have been obvious to one having ordinary skill in the art to form the actuating surfaces of Figure 1 of the instant application as curved for wedging engagement between the clutching elements as taught by Morgan or Ljungstrom.

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

4. Applicant's arguments filed May 12, 2005 have been fully considered but they are not persuasive.

Applicant contends that Morgan and Ljungstrom are directed to clutch mechanisms for screw drivers or a driving element, but not for a ratchet wrench. It appears that applicant is arguing that Morgan or Ljungstrom is nonanalogous art. It has been held that a prior art reference must either be in the field of applicant's endeavor or, if not, then be reasonably pertinent to the particular problem with which the applicant was concerned, in order to be relied upon as a basis for rejection of the claimed invention. See *In re Oetiker*, 977 F.2d 1443, 24 USPQ2d 1443 (Fed. Cir. 1992). In this case, Morgan and Ljungstrom are in the field of ratchet and clutch mechanisms which is in the field of applicant's endeavor and is additionally reasonably pertinent to the providing a clutching/ratcheting mechanism that does not slip.

Figure 1 of the instant application was applied to the rejection of the claims to disclose a ratchet wrench having a clutch mechanism having six pair of flat actuating surfaces on the follower. Morgan and Ljungstrom were applied to the rejection of the claims to disclose a ratchet or clutch mechanism having recesses bound by curved actuating surfaces. Since the claims were directed to the specifics of a ratchet or clutch mechanism, one would look to ratchet or clutch mechanisms in addition to ratchet or clutch mechanisms in a ratchet wrench.

It would have been clearly obvious to form the six pair of flat actuating surfaces of Figure 1 of the instant application as curved to provide for wedging engagement between the clutching elements as taught by Morgan or Ljungstrom.
